## DETAILED ACTION

### *Oath/Declaration*

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:  
It does not identify the citizenship of each inventor.

### *Allowable Subject Matter*

2. The following is an examiner's statement of reasons for allowance:

The instant claims are distinguished over the prior art of record because they provide a method of temporarily connecting a conductive pattern and an electrode with a polysilicon or amorphous silicon conductor, which is insulated from the substrate and the plating solution. The prior art methods use metal conductors to connect the electrode and conductive patterns. For example, Farnworth et al. teach a method of fabricating an interconnect on a semiconductor device using traces, but does not disclose the use of silicon as the conductor means. Akram et al. teach the use of temporary silicon conductors. However, the prior art of record does not teach or suggest the use of silicon conductors that are electrically isolated from the substrate and the plating solution. The use of isolated silicon conductors helps prevent the interference associated with metal traces when they are diced.
